Statically linked libraries	Dynamically linked libraries
Functions written for matrix multiplication, transformation and ppm parser were defined in the binary file here. This binary file was larger because of the above reason The .a files had definitions of only those functions declared in the file and was much smaller compared to the .so files. After the executable was available, it was ready to run.	Functions written for matrix multiplication, transformation and ppm parser were not defined in the binary file here. This binary file was smaller compared to the statically linked binary file. The .so files produced here had definitions for a lot of functions and was larger compared to the .a files Even after the executable was available we had to set the path LD_LIBRARY_PATH which points to all the required .so files.
